NORME EUROPÉENNE
EUROPÄISCHE NORM

EN 10216-2:2013+A1

December 2019

ICS 23.040.10; 77.140.75

Supersedes EN 10216-2:2013

English Version

Seamless steel tubes for pressure purposes - Technical
delivery conditions - Part 2: Non-alloy and alloy steel tubes
with specified elevated temperature properties

Tubes sans soudure en acier pour service sous
pression - Conditions techniques de livraison - Partie 2:
Tubes en acier non allié et allié avec caractéristiques
spécifiées à température élevée

Nahtlose Stahlrohre für Druckbeanspruchungen -
Technische Lieferbedingungen - Teil 2: Rohre aus
unlegierten und legierten Stählen mit festgelegten
Eigenschaften bei erhöhten Temperaturen

This European Standard was approved by CEN on 17 August 2013 and includes Amendment 1 approved by CEN on 23
September 2019.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this
European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references
concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN
member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by
translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management
Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia,
Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway,
Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and
United Kingdom.

European foreword

This document (EN 10216-2:2013+A1:2019) has been prepared by Technical Committee CEN/TC 459 SC/10 "Steel tubes, and iron and steel fittings", the secretariat of which is held by UNI.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by June 2020, and conflicting national standards shall be withdrawn at the latest by June 2020.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

This document includes Amendment 1 approved by CEN on 23 September 2019.

This document supersedes ~~A1~~ EN 10216-2:2013 ~~A1~~.

The start and finish of text introduced or altered by amendment is indicated in the text by tags ~~A1~~ A1.

For the list of the most significant technical changes that ~~A1~~ were made in EN 10216-2:2013 ~~A1~~, see Annex B.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association, and supports essential requirements of EU Directive(s).

For relationship with EU Directive(s), see informative Annex ZA, which is an integral part of this document.

This European Standard consists of the following parts, under the general title "*Seamless steel tubes for pressure purposes – Technical delivery conditions*":

- *Part 1: Non-alloy steel tubes with specified room temperature properties*
- *Part 2: Non-alloy and alloy steel tubes with specified elevated temperature properties* (the present document)
- *Part 3: Alloy fine grain steel tubes*
- *Part 4: Non-alloy and alloy steel tubes with specified low temperature properties*
- *Part 5: Stainless steel tubes*

Another European Standard series covering tubes for pressure purposes is:

EN 10217, *Welded steel tubes for pressure purposes – Technical delivery conditions*

According to the CEN-CENELEC Internal Regulations, the national standards organisations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

~~A1 deleted text A1~~

1 Scope

This European Standard specifies the technical delivery conditions in two test categories for seamless tubes of circular cross section, with specified elevated temperature properties, made of non-alloy and alloy steel.

This Part of EN 10216 may also be applied for tubes of non-circular cross section; necessary modification should be agreed at the time of enquiry and order.

NOTE Once this standard is published in the Official Journal of the European Union (OJEU) under Directive 2014/68/EU, presumption of conformity to the Essential Safety Requirements (ESR) of Directive 2014/68/EU is limited to technical data of materials in this standard and does not presume adequacy of the material to a specific item of equipment. Consequently, the assessment of the technical data stated in this material standard against the design requirements of this specific item of equipment to verify that the ESRs of the Pressure Equipment Directive are satisfied, needs to be done by the designer or manufacturer of the pressure equipment, taking also into account the subsequent manufacturing processes which may affect properties of the base materials.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3 Terms and definitions

For the purposes of this document, the terms and definitions given in EN 10020, EN 10021, [A1] EN ISO 4885 [A1] and EN 10266 and the following apply.

3.1

test category

classification that indicates the extent and level of inspection and testing

3.2

employer

organization for which a person works on a regular basis

Note 1 to entry: The employer may be either the tube manufacturer or supplier or a third party organization providing Non-Destructive Testing (NDT) services.

4 Symbols

For the purposes of this document, the symbols given in EN 10266 and the following apply:

- d specified inside diameter
- d_{min} specified minimum inside diameter
- T_{min} specified minimum wall thickness
- D_c calculated outside diameter
- d_c calculated inside diameter
- T_c calculated wall thickness
- TC test category

5 Classification and designation

5.1 Classification

In accordance with the classification system in EN 10020, the steel grades P195GH, P235GH and P265GH are classified as non-alloy quality steels and the other steel grades are classified as alloy special steels.

5.2 Designation

5.2.1 For the tubes covered by this Part of EN 10216, the steel designation consists of:

- the number of this Part of EN 10216;
- plus either:
- the steel name in accordance with EN 10027-1;
- or:
- the steel number allocated in accordance with EN 10027-2.

5.2.2 The steel name of non-alloy steel grades is designated by:

- the capital letter P for pressure purposes;
- the indication of the specified minimum yield strength at room temperature for wall thickness less than or equal to 16 mm, expressed in MPa (see Table 4);
- the symbols GH for elevated temperature.

5.2.3 The steel name of alloy steel grades is designated by the chemical composition (see Table 2) and the symbols for the heat treatment, where specified in column 3 and footnote c of Table 1.

6 Information to be supplied by the purchaser

6.1 Mandatory information

The following information shall be supplied by the purchaser at the time of enquiry and order:

- a) the quantity (mass or total length or number);
- b) the term "tube";
- c) the dimensions (outside diameter D and wall thickness T or a set of dimensions covered by Option 11) (see Table 6);
- d) the designation of the steel grade in accordance with this Part of EN 10216 (see 5.2);
- e) the test category (TC) for non-alloy steel (see 9.3).

6.2 Options

A number of options are specified in this Part of EN 10216 and these are listed below. In the event that the purchaser does not indicate a wish to implement any of these options at the time of enquiry and order, the tubes shall be supplied in accordance with the basic specification (see 6.1).

- 1) Cold finishing (see 7.2.2);
- 2) restriction on copper and tin content (see Table 2);
- 3) product analysis (see 8.2.2);
- 4) verification of impact energy (see Table 4);
- 5) verification of longitudinal impact energy at -10° C for non-alloy steel grades (see Table 4);
- 6) verification of elevated temperature properties (see 8.3.2);
- 7) selection test method for verification of leak-tightness (see 8.4.2.1);
- 8) Non-Destructive Testing for test category 2 tubes for detection of transverse imperfections (see 8.4.2.2);
- 9) Non-Destructive Testing for test category 2 tubes for detection of laminar imperfections (see 8.4.2.2);
- 10) special ends preparation (see 8.6);
- 11) set of dimensions other than D and T (see 8.7.1);
- 12) exact lengths (see 8.7.3);
- 13) the type of inspection certificate 3.2 other than the standard document (see 9.2.1);
- 14) test pressure for hydrostatic leak-tightness test (see 11.8.1);
- 15) wall thickness measurement away from the ends (see 11.9);

- 16) Non-Destructive Testing method (see 11.11.1);
- 17) additional marking (see 12.2);
- 18) protection (see Clause 13).

6.3 Examples of an order

6.3.1 Example 1

100 t of seamless tube with an outside diameter of 168,3 mm, a wall thickness of 4,5 mm, in accordance with EN 10216-2, made of steel grade P265GH, to test category 1 with a 3.2 inspection certificate in accordance with EN 10204:

EXAMPLE 100 t - Tube - 168,3 x 4,5 - EN 10216-2 - P265GH - TC1 - Option 13: 3.2

6.3.2 Example 2

100 m of seamless tube with a minimum inside diameter of 240 mm, a minimum wall thickness of 40 mm in accordance with EN 10216-2 A1, made of steel grade 10CrMo9-10, with a 3.2 inspection certificate in accordance with EN 10204:

EXAMPLE 100 m - Tube - d_{min} 240 x T_{min} 40 - EN 10216-2 - 10CrMo9-10 - Option 13: 3.2

7 Manufacturing process

7.1 Steel making process

The steelmaking process is at the discretion of the manufacturer with the exception that the open hearth (Siemens-Martin) process shall not be employed unless in combination with a secondary steelmaking or ladle refining process.

Steels shall be fully killed.

NOTE This excludes the use of rimming, balanced or semi-killed steel.

7.2 Tube manufacture and delivery conditions

7.2.1 All NDT activities shall be carried out by qualified and competent level 1,2 and/or 3 personnel authorized to operate by the employer.

The qualification shall be in accordance with ISO 11484 or, at least, an equivalent to it.

It is recommended that the level 3 personnel be certified in accordance with EN ISO 9712 or, at least, an equivalent to it.

The operating authorization issued by the employer shall be in accordance with a written procedure.

NDT operations shall be authorized by level 3 NDT individual approved by the employer.

NOTE The definition of level 1, 2 and 3 can be found in appropriate standards, e.g. EN ISO 9712 and ISO 11484.

7.2.2 The tubes shall be manufactured by a seamless process.

Unless option 1 is specified, the tubes may be either hot or cold finished at the discretion of the manufacturer. The terms "hot finished" and "cold finished" apply to the condition of the tube before it is heat treated in accordance with A₁ 7.2.3 A₁.

Option 1: The tubes shall be cold finished before heat treatment.

7.2.3 The tubes shall be supplied in the relevant heat treatment conditions as specified in Table 1.

Table 1 — Heat treatment conditions

Steel grade		Heat treatment ^a	Austenitizing		Tempering	
Steel name	Steel number		Temperature °C	Cooling Medium	Temperature °C	Cooling medium

X11CrMoWVNb9-1-1	1.4905	+NT ^c	1 040 to 1 080	Air	740 to 780	air
X20CrMoV11-1	1.4922	+NT ^c	1 020 to 1 080	air	730 to 780	air

^a +N = Normalizing, +NT = Normalizing + Tempering, +QT = Quenching + Tempering (air or liquid), +I = Isothermal Annealing.

^b Normalizing includes Normalizing Forming. Normalized Forming shall be carried out in a temperature range from 880 °C to 1 000 °C.

^c For these steel grades it may be necessary in the case of wall thickness T above 10 mm or $T/D > 0,15$ to apply quenching and tempering in order to achieve the intended structure and material properties. The decision shall be left to the discretion of the manufacturer but shall be stated to the customer at the time of enquiry and order. Steel tubes treated in such a way shall be designated by the steel name supplemented by the symbol "+QT".

^d For these steel grades it may be necessary in case of wall thickness T above 16 mm or $T/D > 0,15$ to apply quenching and tempering in order to achieve the intended structure and material properties. The decision shall be left to the discretion of the manufacturer but shall be stated to the customer at the time of enquiry and order. Steel tubes treated in such a way shall be designated by the steel name supplemented by the symbol "+QT".

8 Requirements

8.1 General

When supplied in a delivery condition indicated in 7.2 and inspected in accordance with Clauses 9, 10 and 11, the tubes shall conform to the requirements of this Part of EN 10216.

In addition, the general technical delivery requirements specified in EN 10021 shall apply.

Tubes shall be suitable for hot and cold bending provided the bending is carried out in an appropriate manner.

When tubes are specified in the order by d , d_{min} or T_{min} the following formulae, with all terms in mm, shall apply for the calculation of outside diameter D_c , inside diameter d_c and wall thickness T_c , instead of D , d and T for the relevant requirements in 8.4.1.4, 10.2.2.2, 11.3, 11.8.1, 11.9, 11.11.4, 12.1 and Table 1, footnote c, Tables 4, 5, 8, 10, 13 and 14:

$$D_c = d + 2T \quad (1)$$

$$D_c = d_{min} + \frac{\text{tolerance} \cdot of \cdot d_{min}}{2} + 2T \quad (2)$$

$$d_c = d_{min} + \frac{\text{tolerance} \cdot of \cdot d_{min}}{2} \quad (3)$$

$$T_c = T_{min} + \frac{\text{tolerance} \cdot of \cdot T_{min}}{2} \quad (4)$$

For tolerances, see Tables 8, 9 and 10.

8.2 Chemical composition

8.2.1 Cast analysis

The cast analysis reported by the steel producer shall apply and conform to the requirements of Table 2.

When welding tubes produced in accordance with this Part of this EN 10216, account should be taken of the fact that the behaviour of the steel during and after welding is dependent not only on the steel, but also on the applied heat treatment and the conditions of preparing for and carrying out the welding.

8.2.2 Product analysis

Option 3: Product analysis for the tubes shall be supplied.

Table 3 specifies the permissible deviations of the product analysis from the specified limits on cast analysis given in Table 2.

Table 2 — Chemical composition (cast analysis)^a, in % by mass

^a Elements not included in this table shall not be intentionally added to the steel without the agreement of the purchaser, except for elements which may be added for finishing the cast. All appropriate measures shall be taken to prevent the addition of undesirable elements from scrap or other materials used in the steel making process.

^b This requirement is not applicable provided the steel contains a sufficient amount of other nitrogen binding elements which shall be reported. When using titanium, the producer shall verify that $(Al + Ti/2) \geq 0,020\%$.

^c **Option 2:** In order to facilitate subsequent forming operations, an agreed maximum copper content lower than indicated and an agreed specified maximum tin content shall apply.

^d The content of these elements need not to be reported unless intentionally added to the cast.

- e For wall thickness $T \geq 30$ mm the carbon content may be increased by 0,02 % for cast and product analysis.
- f The upper carbon value of 0,23 % shall not be exceeded for product analysis.
- g Alternatively, in lieu of the minimum ratio the material shall have a minimum hardness of 275 HV in the hardened condition, defined as after austenitizing and cooling to room temperature, but before tempering. Hardness testing shall be performed at mid thickness of the product. The ΔH testing ΔH frequency shall be two samples of product per heat treatment lot and the hardness testing results shall be reported.

Table 3 — Permissible deviations of the product analysis from specified limits on cast analysis given in Table 2

Element	Limiting value for the cast analysis in accordance with Table 2 % by mass	Permissible deviation of the product analysis % by mass

	> 0,10 to ≤ 0,55	± 0,03
W	≤ 2,00	± 0,10

8.3 Mechanical properties

8.3.1 Mechanical properties at and below room temperature

The mechanical properties at and below room temperature of the tubes shall conform to the requirements in Table 4 and in 11.3, 11.4, 11.5 and 11.6 irrespective of whether they are verified or not (see Table 13).

8.3.2 Proof strength at elevated temperature

The minimum proof strength $R_{p0,2}$ values at elevated temperature are given in Table 5.

Option 6: Proof strength $R_{p0,2}$ shall be verified. The test temperature shall be specified at the time of enquiry and order.

8.3.3 Creep rupture strength

The creep rupture strength values are given in Annex A for information.

Table 4 — Mechanical properties

^a 1 MPa = 1 N/mm².

8.4 Appearance and internal soundness

8.4.1 Appearance

8.4.1.1 The tubes shall be free from external and internal surface defects that can be detected by visual examination.

8.4.1.2 The internal and external surface finish of the tubes shall be typical of the manufacturing process and, where applicable, the heat treatment employed. Normally the finish and surface condition shall be such that any surface imperfections requiring dressing can be identified.

8.4.1.3 It shall be permissible to dress, only by grinding or machining, surface imperfections provided that, after doing so, the wall thickness in the dressed area is not less than the specified minimum wall thickness. All dressed areas shall blend smoothly into the contour of the tube.

8.4.1.4 Any surface imperfection, which is demonstrated to be deeper than 5 % of the wall thickness T or 3 mm, whichever is the smaller, shall be dressed.

This requirement does not apply to surface imperfection with a depth equal or less 0,3 mm

8.4.1.5 Surface imperfections which encroach on the specified minimum wall thickness shall be considered defects and tubes containing these shall be deemed not to conform to this Part of EN 10216.

8.4.2 Internal soundness

8.4.2.1 Leak Tightness

The tubes shall pass a hydrostatic test (see 11.8.1) or electromagnetic test (see 11.8.2) for leak-tightness. Unless option 7 is specified, the choice of the test method is at the discretion of the manufacturer.

Option 7: The test method for verification of leak-tightness in accordance with 11.8.1 or 11.8.2 is specified by the purchaser.

8.4.2.2 Non-Destructive Testing

The tubes of test category 2 shall be subjected to a non-destructive testing for the detection of longitudinal imperfections, in accordance with 11.11.1.

Option 8: The tubes of test category 2 shall subjected to a non-destructive testing for the detection of transverse imperfections in accordance with 11.11.2.

Option 9: The tubes of test category 2 shall be subjected to a non-destructive testing for the detection of the laminar imperfections in accordance with 11.11.3.

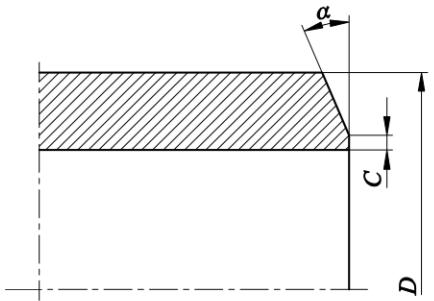

8.5 Straightness

The deviation from straightness of any tube length L shall not exceed $0,0015 L$. Deviations from straightness over any one metre length shall not exceed 3 mm.

8.6 Preparation of ends

Tubes with wall thickness $\geq 3,2$ mm shall be delivered with square cut ends. The ends shall be free from excessive burrs.

Option 10: The tubes shall be delivered with bevelled ends (see Figure 1). The bevel shall have an angle α of $30^\circ \pm 5^\circ$ with a root face C of $1,6$ mm $\pm 0,8$ mm, except that for wall thickness T greater than 20 mm, an agreed alternative bevel may be specified.

**Key**

- D outside diameter
- α bevel angle
- C root face of bevelled end

Figure 1 — Tube end bevel

8.7 Dimensions, masses and tolerances

8.7.1 Diameter and wall thickness

Unless option 11 is specified, tubes shall be delivered by outside diameter D and wall thickness T .

Preferred outside diameters D and wall thicknesses T have been selected from EN 10220 and are given in Table 6.

Dimensions which are different from those in Table 6 may be agreed.

Option 11: The tubes shall be delivered in accordance with one of the following sets of dimensions as specified at the time of enquiry and order:

- outside diameter D and minimum wall thickness T_{min} ;
- inside diameter d and wall thickness T for $d \geq 220$ mm;
- inside diameter d and minimum wall thickness T_{min} for $d \geq 220$ mm;
- minimum inside diameter d_{min} and wall thickness T for $d_{min} \geq 220$ mm;
- minimum inside diameter d_{min} and minimum wall thickness T_{min} for $d_{min} \geq 220$ mm.

Table 6 — Preferred dimensions

^a series 1 = diameter for which all the accessories needed for the construction of piping system are standardized;
 series 2 = diameter for which not all the accessories are standardized;
 series 3 = diameter for special application for which very few standardized accessories exist.

8.7.2 Mass

For the mass per unit length, the provisions of EN 10220 apply except that for the steel grade X11CrMo9-1+I, X11CrMo9-1+NT, X10CrMoVNb9-1 and X20CrMoV11-1 a density of 7,77 kg/dm³ shall be used.

8.7.3 Lengths

Unless option 12 is specified, the tubes shall be delivered in random length. The delivery length range shall be agreed at the time of enquiry and order.

Option 12: *The tubes shall be delivered in exact lengths and the length shall be specified at the time of enquiry and order. For the tolerances see 8.7.4.2.*

8.7.4 Tolerances

8.7.4.1 Tolerances on diameter and thickness

The diameter and the wall thickness of the tubes shall be within the relevant tolerance limits given in Tables 7, 8, 9, 10 or 11.

Out of roundness is included in the tolerances on diameter and eccentricity is included in the tolerances on wall thickness.

Table 7 — Tolerances on outside diameter and wall thickness

Outside Diameter D mm	Tolerances on D	Tolerances on T for a T/D ratio			
		$\leq 0,025$	$> 0,025$	$> 0,050$	$> 0,10$
$D \leq 219,1$	$\pm 1\%$ or $\pm 0,5$ mm whichever is the greater	$\pm 12,5\%$ or $\pm 0,4$ mm whichever is the greater		$\leq 0,050$	$\leq 0,10$
$D > 219,1$		$\pm 20\%$	$\pm 15\%$	$\pm 12,5\%$	$\pm 10\%$ ^a

^a For outside diameters $D \geq 355,6$ mm it is permitted to exceed the upper wall thickness locally by a further 5 % of the wall thickness T .

Table 8 — Tolerances on inside diameter and wall thickness

d	d_{min}	Tolerances on T for a T/d ratio			
		$\leq 0,03$ $\leq 0,06$	$> 0,03$ $\leq 0,12$	$> 0,06$ $\leq 0,12$	$> 0,12$
$\pm 1\%$ or ± 2 mm whichever is the greater	+ 2 % or 0 0 greater	$\pm 20\%$	$\pm 15\%$	$\pm 12,5\%$	$\pm 10\%$ ^a

^a For outside diameters $D \geq 355,6$ mm it is permitted to exceed the upper wall thickness locally by a further 5 % of the wall thickness T .

Table 9 — Tolerances on outside diameter and minimum wall thickness

Outside diameter <i>D</i> mm	Tolerances on <i>D</i>	Tolerances on <i>T_{min}</i> for a <i>T_{min}/D</i> ratio			
		≤ 0,02 0	> 0,02 ≤ 0,04 0	> 0,04 ≤ 0,09 0	> 0,09 0
<i>D</i> ≤ 219,1	± 1 % or ± 0,5 mm whichever is the greater	+ 28 % 0	or + 0,8 mm 0	whichever is the greater	
<i>D</i> > 219,1		+ 50 % 0	+ 35 % 0	+ 28 % 0	+ 22 % ^a 0

^a For outside diameters $D \geq 355,6$ mm it is permitted to exceed the upper wall thickness locally by a further 5 % of the wall thickness *T*.

Table 10 — Tolerances on inside diameter and minimum wall thickness

d	Tolerances on inside diameter	<i>d_{min}</i>	Tolerances on <i>T_{min}</i> for a <i>T_{min}/d</i> ratio		
			≤ 0,05 0	> 0,05 ≤ 0,1 0	> 0,1 0
± 1 % or ± 2 mm whichever is the greater	+ 2 % or + 4 mm 0	whichever is the greater	+ 35 % 0	+ 28 % 0	+ 22 % ^a 0

^a For outside diameters $D \geq 355,6$ mm it is permitted to exceed the upper wall thickness locally by a further 5 % of the wall thickness *T*.

Table 11 — Tolerances on outside diameter and wall thickness for tube ordered cold finished

Tolerance on <i>D</i>	Tolerance on <i>T</i>
± 0,5 % or ± 0,3 mm whichever is the greater	± 10 % or ± 0,2 mm whichever is the greater

8.7.4.2 Tolerances on exact lengths

The tolerances for exact lengths shall be as given in Table 12.

Table 12 — Tolerances on exact lengths

Dimensions in mm

Length <i>L</i>	Tolerance on exact length
<i>L</i> ≤ 6 000	+10 0
6 000 < <i>L</i> ≤ 12 000	+15 0
<i>L</i> > 12 000	+ by agreement 0

9 Inspection

9.1 Types of inspection

Conformity to the requirements of the order, for tubes in accordance with this Part of EN 10216, shall be verified by specific inspection.

When an inspection document 3.1 is specified, the material manufacturer shall state in the confirmation of the order whether he is operating according to a "quality-assurance system", certified by a competent Body established within the Community and having undergone a specific assessment for materials.

NOTE See the [\(A\) Directive 2014/68/EU \(A1\)](#), Annex I, section 4.3 third paragraph and for further information the Guidelines of the EU Commission and the Member States for its interpretation (see e.g. Guidelines [\(A\) G-02](#) and [G-16 \(A1\)](#)).

9.2 Inspection documents

9.2.1 Types of inspection documents

Unless option 13 is specified, an inspection certificate 3.1, in accordance with EN 10204, shall be issued.

Option 13: The inspection certificate 3.2 in accordance with EN 10204 shall be issued.

If an inspection certificate 3.2 is specified, the purchaser shall notify the manufacturer of the name and address of the organization or person who is to carry out the inspection and produce the inspection document.

In the case of the inspection certificate 3.2, it shall be agreed which party shall issue the certificate.

Document 3.1 and 3.2 are to be validated by the manufacturer's authorized representative.

9.2.2 Content of inspection documents

The content of the inspection document shall be in accordance with EN 10168.

In all types of inspection documents, a statement on the conformity of the products delivered with the requirements of this specification and the order shall be included.

The inspection certificate shall contain the following codes and information:

- A commercial transactions and parties involved;
- B description of products to which the inspection document applies;
- C02-C03 direction of the test pieces and testing temperature;
- C10-C13 tensile test;
- C40-C43 impact test, if applicable;
- C60-C69 other tests;
- C71-C92 chemical composition on cast analysis (product analysis, if applicable);
- D01 marking and identification, surface appearance, shape and dimensional properties;
- D02-D99 leak-tightness test; NDT, material identification, if applicable;
- Z validation.

In addition, for inspection certificate 3.1, the manufacturer shall state the references to the certificate (see 9.1) of the appropriate "quality-assurance system", if applicable.

9.3 Summary of inspection and verification testing

Non-alloy steel tubes shall be inspected and tested in accordance with test category 1 or test category 2 as specified at the time of inquiry and order (see 6.1).

Alloy steel tubes shall be inspected and tested in accordance with test category 2 (see Table 13).

Inspection and testing to be carried out are summarized in Table 13.

Table 13 — Summary of inspection and verification testing

Type of inspection and test		Frequency of Testing	Refer to	Test category (TC)	
				1	2
Mandatory tests	Cast analysis	One per cast	8.2.1 - 11.1	X	X
	Tensile test at room temperature	One per sample tube	8.3.1 - 11.2.1	X	X
	Flattening test for $D < 600$ mm and T/D ratio $\leq 0,15$ but $T \leq 40$ mm or ^{a b}		8.3 - 11.3 - 11.4	X	X
	Ring tensile test for $D > 150$ mm and $T \leq 40$ mm				
	Drift expanding test for $D \leq 150$ mm and $T \leq 10$ mm or ^{a b}		8.3 - 11.5 - 11.6	X	X
	Ring expanding test for $D \leq 114,3$ mm and $T \leq 12,5$ mm				
	Impact test at 20° C for Group A ^c		8.3 - 11.7	X	X
	Leak tightness test	Each tube	8.4.2.1 - 11.8	X	X
	Dimensional inspection		8.7.1 - 11.9	X	X
	Visual examination		11.10	X	X
Optional tests	NDT for the detection of longitudinal imperfections	Each tube	8.4.2.2 - 11.11.1	--	X
	Material identification of alloy steels		11.12	X	X
	Product analysis (Option 3)	One per cast	8.2.2 - 11.1	X	X
	Tensile test at elevated temperature (Option 6)	One per cast and same heat treatment condition	8.3.2 - 11.2.2	X	X
	Impact test for Group B ^c (Option 4)	One per sample tube	8.3 - 11.7	X	X
	Longitudinal impact test at -10°C for non-alloy steel grades (Option 5)		8.3 - 11.7	X	X
	Wall thickness measurement away from tube ends (Option 15)		8.7.1 - 11.9	X	X
	NDT for the detection of transverse imperfections (Option 8)	Each tube	8.4.2.2 - 11.11.2	--	X
	NDT for the detection of laminar imperfections (Option 9)		8.4.2.2 - 11.11.3	--	X

- ^a The choice of flattening or ring tensile test and of drift expanding test or ring expanding test is at the manufacturer's discretion.
- ^b For steel grades X10CrMoVNb9-1, X10CrWMoVNb9-2, X11CrMoWVNb9-1-1 and X20CrMoV11-1 tubes, the flattening or ring tensile test and the drift expanding test or ring expanding test shall be carried out at one end of 20 % of the tubes of each test unit.
- ^c **A1** Group A: tubes having wall thickness $T \geq 16$ mm manufactured from steel grades 14MoV6-3, 25CrMo4, 20CrMoV13-5-5, 15NiCuMoNb5-6-4, X10CrMoVNb9-1, 7CrWVMoNb9-6, 7CrMoVTiB10-10, X10CrWMoVNb9-2, X11CrMoWVNb9-1-1 and X20CrMoV11-1.,
Group B: tubes having wall thickness $T < 16$ mm manufactured from steel grades 14MoV6-3, 25CrMo4, 20CrMoV13-5-5, 15NiCuMoNb5-6-4, X10CrMoVNb9-1, 7CrWVMoNb9-6, 7CrMoVTiB10-10, X10CrWMoVNb9-2, X11CrMoWVNb9-1-1 and X20CrMoV11-1 and all wall thicknesses manufactured from steel grades P195GH, P235GH, P265GH, 20MnNb6, 16Mo3, 8MoB5-4, 10CrMo5-5, 13CrMo4-5, 10CrMo9-10, 11CrMo9-10, X11CrMo5+I, X11CrMo5+NT1, X11CrMo5+NT2, X11CrMo9-1+I, X11CrMo9-1+NT. **A1**.

10 Sampling

10.1 Frequency of tests

10.1.1 Test unit

For normalized formed tubes, a test unit shall comprise tubes of the same specified diameter and wall thickness, the same steel grade, the same cast, the same manufacturing process.

For tubes which are furnace heat treated, a test unit shall comprise tubes of the same specified diameter and wall thickness, the same steel grade, the same cast, the same manufacturing process, subjected to the same finishing treatment in a continuous furnace or heat treated in the same furnace charge in a batch-type furnace.

The number of tubes per test unit shall conform to Table 14.

The manufacturing length (e.g. the rolled length after the normalizing forming process) may differ from the delivery length providing there is no additional HT after cutting the manufacturing lengths into individual lengths.

Table 14 — Number of tubes per test unit

Outside diameter D mm	Maximum number of tubes per test unit
$D \leq 114,3$	200
$114,3 < D \leq 323,9$	100
$D > 323,9$	50

10.1.2 Number of sample tubes per test unit

The following number of sample tubes shall be selected from each test unit:

- test category 1: one sample tube;
- test category 2: two sample tubes; when the total number of tubes is less than 20, only one sample tube.

10.2 Preparation of samples and test pieces

10.2.1 Selection and preparation of samples for product analysis

Samples for product analysis shall be taken from the test pieces or samples for mechanical testing or from the whole thickness of the tube at the same location as the mechanical test samples, in accordance with EN ISO 14284.

10.2.2 Location, orientation and preparation of samples and test pieces for mechanical test

10.2.2.1 General

Samples and test pieces shall be taken at the tube ends and in accordance with the requirements of EN ISO 377.

10.2.2.2 Test pieces for tensile tests

The test pieces for the tensile tests at room temperature shall be prepared in accordance with EN ISO 6892-1.

The test piece for the tensile tests at elevated temperature shall be prepared in accordance with EN ISO 6892-2.

At the manufacturer's discretion:

- for tubes with an outside diameter $D \leq 219,1$ mm, the test piece shall be either a full tube section or a strip section and shall be taken in a direction longitudinal to the axis of the tube;
- for tubes with an outside diameter $D > 219,1$ mm, the test piece shall either a machined test piece with circular cross section from an unflattened sample or a strip section and be taken in a direction either longitudinal or transverse to the axis of the tube.

10.2.2.3 Test pieces for flattening test, ring tensile test, drift expanding test and ring expanding test

The test pieces for the flattening test, ring tensile test, drift expanding test and the ring expanding test shall consist of a full tube section in accordance with EN ISO 8492, EN ISO 8496, EN ISO 8493 or EN ISO 8495 respectively.

10.2.2.4 Test pieces for impact test

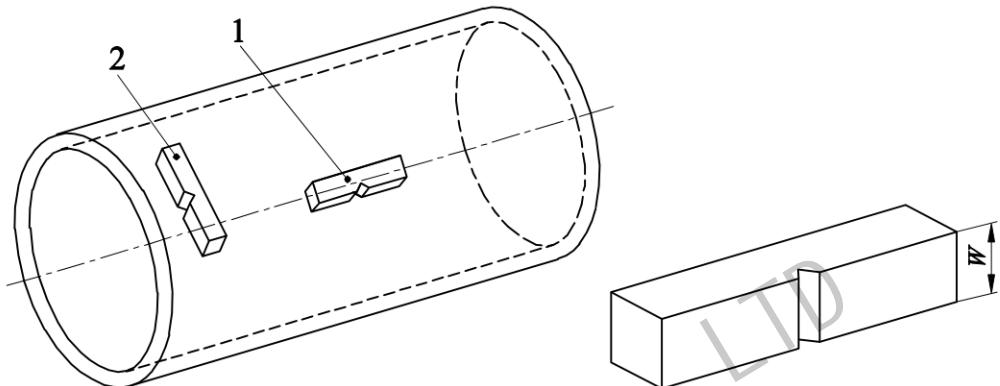

Three standard Charpy V-notch test pieces shall be prepared in accordance with EN ISO 148-1. If the wall thickness is such that standard test pieces cannot be produced without flattening of the section, then test pieces of width less than 10 mm, but not less than 5 mm shall be prepared; the largest obtainable width shall be used.

Where test pieces of least 5 mm width cannot be obtained, the tubes shall not be subjected to impact testing.

Unless otherwise specified (see Option 5), the test pieces shall be taken transverse to the tube axis unless D_{min} , as calculated by the following formula, is greater than the specified outside diameter, in which case longitudinal test pieces shall be used:

$$D_{min} = (T-5) + [756,25 / (T-5)] \quad (5)$$

The test pieces shall be prepared such that the axis of the notch is perpendicular to the surface of the tube; see Figure 2.

**Key**

- 1 longitudinal test piece
- 2 transverse test piece
- W width of test piece

Figure 1 — Impact test piece orientation

11 Verification test methods

11.1 Chemical analysis

The elements to be determined and reported shall be those specified in Table 2. The choice of a suitable physical or chemical analytical method for the analysis shall be at the discretion of the manufacturer. In case of dispute the method used shall be agreed between manufacturer and purchaser taking into account CEN/TR 10261.

11.2 Tensile test

11.2.1 Tensile test at room temperature

The test shall be carried out at room temperature in accordance with EN ISO 6892-1, and the following determined:

- the tensile strength (R_m);
- the upper yield strength (R_{eH}) or if a yield phenomenon is not present the 0,2 % proof strength ($R_{p0,2}$);
- the percentage elongation after fracture with a reference to a gauge length (L_0) of $5,65 \cdot \sqrt{S_0}$; if a non-proportional test piece is used, the percentage elongation value shall be converted to the value for a gauge length $L_0 = 5,65 \cdot \sqrt{S_0}$ using the conversion tables in EN ISO 2566-1.

11.2.2 Tensile test at elevated temperature

The test shall be carried out in accordance with EN ISO 6892-2 at the temperature agreed at the time of enquiry and order (see 6.2) and the proof strength ($R_{p0,2}$) shall be determined.

11.3 Flattening test

The test shall be carried out in accordance with EN ISO 8492.

The tube section shall be flattened in a press until the distance H between the platens reaches the value given by the following formula:

$$H = \frac{(1+C)}{C+(T/D)} x T \quad (6)$$

where

H is the distance between platens, in millimetres, to be measured under load;

D is the specified outside diameter, in millimetres;

T is the specified wall thickness, in millimetres;

C is the constant factor of deformation (given in Table 15).

Table 15 — Flattening test - Constant factor of deformation C

Steel grade		
Steel name	Steel number	C
P195GH	1.0348	0,09
P235GH	1.0345	0,09
P265GH	1.0425	0,07
20MnNb6	1.0471	0,07
16Mo3	1.5415	0,07
8MoB5-4	1.5450	0,05
14MoV63	1.7715	0,05
10CrMo5-5	1.7338	0,08
13CrMo4-5	1.7335	0,07
10CrMo9-10	1.7380	0,07
11CrMo9-10	1.7383	0,07
25CrMo4	1.7218	0,06

Steel grade		
Steel name	Steel number	C
20CrMoV13-5-5	1.7779	0,05
15NiCuMoNb5-6-4	1.6368	0,05
7CrWVMoNb9-6	1.8201	0,05
7CrMoVTiB10-10	1.7378	0,05
X11CrMo5+I	1.7362+I	0,05
X11CrMo5+NT1	1.7362+NT1	0,05
X11CrMo5+NT2	1.7362+NT2	0,05
X11CrMo9-1+I	1.7386+I	0,05
X11CrMo9-1+NT	1.7386+NT	0,05
X10CrMoVNb9-1	1.4903	0,05
X10CrWVMoVNb9-2	1.4901	0,05
X11CrMoWVNb9-1-1	1.4905	0,05
X20CrMoV11-1	1.4922	0,05

After testing, the test piece shall be free from cracks or breaks. However, slight incipient cracks at its edges shall not be regarded as justification for rejection.

When low D/T ratio tubular products are tested, because the strain imposed due to geometry is unreasonably high on the inside surface at the six and twelve o'clock locations, cracks at these locations shall not be cause for rejection if the D/T ratio is less than 10.

11.4 Ring tensile test

The test shall be carried out in accordance with EN ISO 8496.

The tube section shall be subjected to strain in the circumferential direction until fracture occurs.

After fracture the test pieces shall not show any visible cracks without the use of magnifying aids (excluding the fracture point).

11.5 Drift expanding test

The test shall be carried out in accordance with EN ISO 8493.

The tube section shall be expanded with a 60° conical tool until the percentage increase in outside diameter shown in Table 16 is reached.

Table 16 — Drift expanding test requirements

Steel grade		% increase in outside diameter for d/D ^a		
Steel name	Steel number	$\leq 0,6$	$> 0,6 \text{ to } \leq 0,8$	$> 0,8$
P195GH	1.0348	12	15	19
P235GH	1.0345	10	12	17
P265GH	1.0425	8	10	15
20MnNb6	1.0471	8	10	15
16Mo3	1.5415	8	10	15
8MoB5-4	1.5450	8	10	15
14MoV63	1.7715	8	10	15
10CrMo5-5	1.7338	8	10	15
13CrMo4-5	1.7335	8	10	15
10CrMo9-10	1.7380	8	10	15
11CrMo9-10	1.7383	8	10	15
25CrMo4	1.7218	6	8	12
20CrMoV13-5-5	1.7779	6	8	12
15NiCuMoNb5-6-4	1.6368	8	10	15
7CrWVMoNb9-6	1.8201	8	10	15
7CrMoVTiB10-10	1.7378	8	10	15
X11CrMo5+I	1.7362+I	8	10	15
X11CrMo5+NT1	1.7362+NT1	8	10	15
X11CrMo5+NT2	1.7362+NT2	8	10	15
X11CrMo9-1+I	1.7386+I	8	10	15
X11CrMo9-1+NT	1.7386+NT	8	10	15
X10CrMoVNb9-1	1.4903	8	10	15
X10CrWVMoNb9-2	1.4901	8	10	15
X11CrMoWVNb9-1-1	1.4905	8	10	15
X20CrMoV11-1	1.4922	6	8	12

^a $d = D - 2T$.

After testing, the test piece shall be free from cracks or breaks. However, slight incipient cracks at its edges shall not be regarded as justification for rejection.

11.6 Ring expanding test

The test shall be carried out in accordance with EN ISO 8495.

The tube section shall be expanded with a conical tool until it breaks. The surface outside the fracture zone shall be free from cracks or breaks. However, slight incipient cracks at its edges shall not be regarded as justification for rejection.

11.7 Impact test

11.7.1 The test shall be carried out (but see 10.2.2.4) in accordance with EN ISO 148-1 at the temperature given in Table 4.

11.7.2 The mean value of the three test pieces shall meet the requirements given in Table 4. One individual value may be below the specified value, provided that it is not less than 70 % of that value.

11.7.3 If the width (w) of the test piece is less than 10 mm, the measured impact energy (KV_p) shall be converted to the calculated impact energy (KV_c) using the following formula:

$$KV_c = \frac{10 \times KV_p}{w} \quad (7)$$

where

KV_c is the calculated impact energy, in joules;

KV_p is the measured impact energy, in joules;

w is the width of the test piece, in millimetres.

The calculated impact energy KV_c shall conform to the requirements given in 11.7.2.

11.7.4 If the requirements of 11.7.2 are not met, then an additional set of three test pieces may be taken at the discretion of the manufacturer from the same sample and tested. To consider the test unit as conforming, after testing the second set, the following conditions shall be satisfied simultaneously:

- the average value of the six tests shall be equal to or greater than the specified minimum average value;
- not more than two of the six individual values may be lower than the specified minimum average value;
- not more than one of the six individual values may be lower than 70 % of the specified minimum average value.

11.7.5 The dimensions in millimetres of the test pieces, the measured impact energy values and the resulting average value shall be reported.

11.8 Leak tightness test

11.8.1 Hydrostatic test

The hydrostatic test shall be carried out at a test pressure of 70 bar¹⁾ or at a test pressure P calculated using the following formula, whichever is lower:

$$P = 20 \frac{S \times T}{D} \quad (8)$$

where

- P is the test pressure, in bar;
- D is the specified outside diameter, in millimetres;
- T is the specified wall thickness, in millimetres;
- S is the stress, in MPa, corresponding to 70 % of the specified minimum yield strength (see Table 4) for the steel grade concerned.

The test pressure shall be held for not less than 5 s for tubes with an outside diameter D less than or equal to 457 mm and for not less than 10 s for tubes with an outside diameter D greater than 457 mm.

The tube shall withstand the test without showing leakage.

NOTE This hydrostatic leak-tightness test is not a strength test.

Option 14: A test pressure different from that specified in 11.8.1.

11.8.2 Electromagnetic test

The test shall be carried out in accordance with EN ISO 10893-1.

11.9 Dimensional inspection

Specified dimensions, including straightness, shall be verified.

The outside diameter shall be measured at tube ends. For tubes with outside diameter $D \geq 406,4$ mm, the diameter may be measured using a circumference tape.

Unless option 15 is specified, the wall thickness shall be measured at both tube ends.

Option 15: The wall thickness shall be measured away from the tube ends in accordance with an agreed procedure.

11.10 Visual examination

Tubes shall be visually examined to ensure conformity to the requirements of 8.4.1.

11.11 Non-destructive testing

11.11.1 Tubes of test category 2 shall be subjected to a Non-Destructive Testing for the detection of longitudinal imperfections, in accordance with EN ISO 10893-10, to acceptance level U2, sub-category C or EN ISO 10893-3 acceptance level F2.

Unless option 16 is specified, the selection of the test method is at the discretion of the manufacturer.

1) 1 bar = 100 kPa.

Option 16: The test method is specified by the purchaser.

Regions at the tube ends not automatically tested shall either be subjected to manual/semi-automatic ultrasonic testing in accordance with EN ISO 10893-10 to acceptance level U2, sub-category C or be cropped off.

11.11.2 If option 8 is specified (see 8.4.2.2), the tubes shall be subjected to ultrasonic testing for the detection of transverse imperfections in accordance with EN ISO 10893-10 to acceptance level U2, sub-category C.

11.11.3 If option 9 is specified (see 8.4.2.2), the tubes shall be subjected to ultrasonic testing for the detection of the laminar imperfections in accordance with EN ISO 10893-8 to acceptance level U2.

11.11.4 For tubes ordered by minimum wall thickness T_{\min} (see option 11), the acceptance level shall apply to the calculated wall thickness T_c as determined in accordance with the formula stated in 8.1.

11.12 Material identification

Each tube made from alloy steel (see 5.1) shall be tested by an appropriate method to ensure that the correct grade is being supplied.

11.13 Retests, sorting and reprocessing

For retest, sorting and reprocessing the requirements of EN 10021 shall apply.

12 Marking

12.1 Marking to be applied

The marking shall be indelibly marked on each tube at least at one end. For tubes with outside diameter $D \leq 51$ mm, the marking on tubes may be replaced by the marking on a label attached to the bundle or box.

The marking shall include the following information:

- the manufacturer's name or trade mark;
- the number of this European Standard and the steel name (see 5.2);
- the test category in case of non-alloy steel grades;
- the cast number or a code number;
- the mark of the inspection representative;
- an identification number (e.g. order or item number) which permits the correlation of the product or delivery unit to the related document.

Example of marking:

EXAMPLE X - EN 10216-2 - P265GH - TC1 - Y- Z₁ - Z₂

where

- X is the manufacturer's mark;
- TC1 is the designation of the test category 1;
- Y is the cast number or a code number;
- Z₁ is the mark of the inspection representative;

Z₂ is the identification number.

12.2 Additional marking

Option 17: Additional marking, as agreed upon at the time of enquiry and order, shall be applied.

13 Protection

The tubes shall be delivered without a temporary protective coating.

Option 18: A temporary protective coating or durable coating and/or lining shall be applied.

Annex A

(informative)

Creep rupture strength values

The creep rupture strength values of steel grades covered by this Part of EN 10216 are given in Table A1.

Table A.1 — Creep rupture strength values (1 of 6)

Steel grade		Temperature °C	Creep rupture strength values for (MPa) ^{a b c d}			
Steel name	Steel number		10 000 h	100 000 h	200 000 h	250 000 h

^a The values listed in the table are values suggested by ECCC (1) and are average values from scatter range determined from existing data which will be assessed from time to time after test results are available and corrected if necessary. The values for the steel grade X10CrMoVNb9-1 has been obtained by new evaluation. For the remaining steel grades, the values were obtained from creep rupture strength values given in national and international standards.

^b The creep rupture strength values given up to the elevated temperature listed in the table, do not mean that the steels can be used in continuous duty up to these temperatures. A governing factor is the total stress during operation.

^c For the creep rupture strength values indicated in the table, the extrapolation times are always less than a factor of three unless indicated by an asterisk (*).

^d 1 MPa = 1 N/mm².

^e Italic printed values for grade 7CrMoVTiNb10-10 have been extrapolated graphically in order to determine the intersection with R_{p0,2} values.

Annex B (informative)

Technical changes from the previous edition

B.1 Introduction

This informative annex is intended to guide the user to places where significant technical changes have been introduced into the previous edition of this European Standard. Editorial changes are not included in this annex. References refer to the previous edition.

While this annex is intended to be comprehensive, the user should satisfy himself that he fully understands the changes which have been made. The user is ultimately responsible for recognizing any differences between this edition and the previous edition of the document.

B.2 Technical changes

- 1 Scope

Annex ZA
 (informative)

Relationship between this European Standard and the Essential Requirements of Directive 2014/68/EU aimed to be covered

This European Standard has been prepared under a Commission's standardization request "M/071" to provide one voluntary means of conforming to Essential Requirements of Directive 2014/68/EU.

Once this standard is cited in the Official Journal of the European Union under that Directive, compliance with the normative clauses of this standard given in Table ZA.1 confers, within the limits of the scope of this standard, a presumption of conformity with the corresponding essential requirements of that Directive, and associated EFTA regulations.

Table ZA.1 — Correspondence between this European Standard and Annex I of Directive 2014/68/EU

Essential Requirements of Directive 2014/68/EU	Clauses/subclauses of this EN	Remarks/Notes
4.1 a	8.3	Appropriate material properties
4.1 c	7.1	Ageing
4.1 d	7.2 and 8.4	Suitable for the processing procedures
4.3	9 and 10	Inspection Documentation

WARNING 1 — Presumption of conformity stays valid only as long as a reference to this European Standard is maintained in the list published in the Official Journal of the European Union. Users of this standard should consult frequently the latest list published in the Official Journal of the European Union.

WARNING 2 — Other Union legislation may be applicable to the product(s) falling within the scope of this standard. [\[A1\]](#)
